

C5 HYDRAULIC Green line

A machine that has been designed and constructed for increasingly demanding market needs. It has a loading capacity of more than 4.5 m³ and, despite its size, it is very easy to tow thanks to the installed towbar. Cardan joint functions with a tractor, just 30HP are needed to get the best level performance. The practical worm screw can be turned in any direction, and allows filling any sort of container even out in the field. The worm screw only works when the driver lever is pressed.
